JavaScript Best Practices

WHY BEST PRACTICES?

Jonathan Mills

Why Best Practices?

JavaScript has been secondary

JavaScript is taking over everything

JavaScript is different...

Don't work in a vacuum.

Don't believe everything you read.

It's dangerous to go alone...

Take knowledge with you

Understanding Syntax

```
var x = 10;

var y = "10";

if (x == y) {

    //this is true...

}
```

◀ Why is this true??

```
function myModule()
{
    return
    {
        x: 3,
        y: 4
    }
}
```

◄ Why won't this work?

Prevent the .01%

"What is 'this'?"

-Every JavaScript developer

"What was I thinking?"

**-Every developer ever...**

"That code is all wrong..."

Picking Your Packages

Tooling up

Automation is your friend

Rules of the road

Talk about why best practices
